## Products - Acoustic

Faces	A-C
Bond	C-Bond
Emissions	E0 (Formaldehyde Emission Class)
Standard	AS/NZS 2270 - 2006

Acoustic plywood is hoop pine A-C interior plywood, perforated or slotted to your specifications. If required, your acoustic plywood can be made fire retardant and/or termite resistant. (Perforations are completed by an external supplier).

Applications for acoustic plywood include internal ceiling and wall linings in schools, public halls, gymnasiums, offices and other commercial premises.

Acoustic plywood is constructed from hoop pine A-C interior plywood.

Acoustic plywood with slotted perforations used in a gymnasium - Auckland, New Zealand.

The natural hoop pine grain is still apparent, despite perforation.
