

**AUSTRAL  
PLYWOODS**

---

## Applications

### Marine Use

Austral Plywoods has manufactured plywood for marine applications for many years. All plywood is produced to Australian standards in compliance with the [EWPA-A-JAS-ANZ product certification scheme](#).

- [Structural Ply](#)
- [Teak & Ash Decking](#)
- [Bendy Ply](#)

### Interior Use

Austral Plywoods manufactures a range of products specifically designed for interior use. Our interior bonded plywood is pressed at lower temperatures, leaving the face veneer with a cleaner and brighter appearance than an "A" bonded plywood. The result is a more aesthetically pleasing clear finish.

- [Walls & Ceilings](#)
- [Bendy Ply](#)
- [V Groove Panelling](#)
- [Acoustic Ply](#)

### Furniture Grade Plywood

Depending on the finish required, Austral Plywoods manufactures a range of products to suit all furniture applications. If the core is a feature of your furniture then we would recommend our marine plywood, as this grade is free of core gaps. For curved furniture, our bendy plywood is best, simplifying the previously painstaking methods used to create curved forms.

- [Interior Ply](#)
- [Structural Ply](#)
- [Bendy Ply](#)

### Lightweight

Austral Plywoods manufactures a range of lightweight panels perfect for caravan and bus construction, office partitioning and many other applications where weight minimisation is critical. We offer several different surfaces (including timber and aluminium) and core materials (including polystyrene and paulownia). Quality is important, and that is why we utilise a European glue system to achieve durable bonds.
