B-B "A" Bond Structural is an exterior grade appearance plywood with numerous applications. It is very popular in marine applications, shop fitting & cabinet making. A full Hoop Pine construction makes for a very stable plywood, and the closed grain veneer produces a superb paint finish. Overall, an extremely workable and tool friendly panel.

F17 Stress Grade

Hoop Pine structural plywood manufactured by Austral Plywoods possesses a stress grade of F17. This superior stress grade is attributable to our premium Hoop Pine resource, the efficient utilisation of that resource, and a commitment to quality manufacture.

If a clear finish is required, we recommend the use of an A-C Interior or Exterior product, rather than a Structural grade.
