Emissions	E0 (Formaldehyde Emission Class)
Standard	AS/NZS 2270 - 2006

Austral Plywoods Hoop Pine plywood is perfect for walls and ceilings, especially when a clear finish is specified. We recommend our Interior grade plywood for this purpose.

Why Interior?

Our Interior plywood has a lighter, brighter and more consistent colour than the Exterior grade, making it ideal for clear finishing. This is achieved through shorter hot press times at lower temperatures, thereby maintaining a light, natural appearance. We manufacture our Interior plywood with a C-Bond glue system which is white in colour, thus eliminating any "bleed through" issues that could otherwise affect appearance.
